DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on May 27, 2004 has been entered.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 33-41 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 16 of U.S. Patent No. 6,312,458 in view of Martin et al. (6,042,605). Claim 16 discloses the invention substantially as claimed in the present application. However, claim 16 does not recite a securement member with a width being less than 0.60 mm, a securement member that is a flat, thin

Page 3

suture, and a securement member adhered to the tubular member, non-continuously or continuously. Martin et al. teach, in figures 1-11 and in col. 6, line 47 to col. 7, line 54; col. 8, lines 65-67, and in col. 14, lines 4-6, an endoluminal prosthesis with an elongate, ePTFE tubular member (4), a structural support member (6); and an elongate, PTFE securement member (8) that is a flat, thin suture helically arranged with respect to the longitudinal axis of the tubular member. The securement member secures the structural support member to the exterior surface of the tubular member, and the securement member is adhered to the tubular member, non-continuously or continuously (see col. 7, lines 44-54). Martin et al. also teaches, in col. 7, lines 14-19, a width of the securement member can be chosen according the desired properties of the prosthesis (radial stiffness, burst pressure, and porosity). Thus, it would have been a matter of design choice to one skilled in the art at the time the invention was made, in view of Martin et al., to modify the securement member of Golds, such that it has a width less than 0.60 mm, that it is a flat, thin suture, and that it is adhered to the tubular member, non-continuously or continuously. A securement width that is less than 0.60 mm and a securement adhered to a tubular member, non-continuously or continuously, can be chosen according to the desired radial stiffness, burst pressure, porosity, and flexibility of an endoluminal prosthesis for a specific vessel. Also, it would have been obvious to one having ordinary skill in the art, to apply a flat, thin suture as a securement member. Such a suture is strong, flexible, and biocompatible, and it provides a low cross-sectional profile, so that the prosthesis can easily conform to a vessel wall.

Response to Arguments

1

4. Applicant's arguments with respect to claims 33-41 have been considered but are most in view of the new ground(s) of rejection.

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Julian W. Woo whose telephone number is (703) 308-0421. The examiner can normally be reached Mon.-Fri., 7:00 AM to 3:00 PM Eastern Time, alternate Fridays off.

General inquiries relating to the status of this application should be directed to the Group receptionist at (703) 308-0858. The official FAX number is (703) 872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
